

NEXT-GEN APPROACH TO VULNERABILITY MANAGEMENT

New vulnerabilities are detected every day. The sheer number of vulnerabilities makes it extremely costly and time consuming for security/development teams to keep up. Criminal gangs leveraging GenAI are expected to increase the velocity of vulnerabilities.

PROACTIVE VULNERABILITY MANAGEMENT

Rampart alerts you when abnormal behavior occurs. It also provides a dashboard of vulnerabilities impacting your environment and details how they are being addressed by Rampart and your security team.

IMMEDIATE ALERTS & PROTECTION

Rampart provides your security team with a suite of tools that remove, mitigate, block, and patch vulnerabilities.

COMPREHENSIVE REPORTING & INSIGHTS

This allows the security team to focus on immediate threats to your environment, going beyond the Common Vulnerability Scoring System (CVSS), and focus on how CVEs impact your business.

KEY BENEFITS:

1. Reduce cost while providing comprehensive vulnerability coverage
2. Complete digital asset inventory
3. Monitors and notifies you security team in real-time when new vulnerabilities that impact your environment
4. Comprehensive dashboard to support security and development teams
5. Provides ranked list of vulnerabilities and how they should be handled
6. Provides an automated response for a class of vulnerabilities allowing the development team to stay focused on product development
